Salesforce Certifications:

- Salesforce Administrator.
- Salesforce platform developer-1.
- Salesforce CPQ Specialist

Key Project Highlights

Health Cloud – REMS Platform:

Position: Salesforce Developer

A Risk Evaluation and Mitigation Strategy (REMS) is a drug safety program. REMS is designed to reinforce medication use behaviors and actions that support the safe use of that medication. While all medications have labeling that informs healthcare stakeholders about medication risks, only a few medications require a REMS. FDA was established in 2007 to help ensure that medications are used safely, and risks of serious side effects are minimized. The purpose of the REMS is to ensure that the drug is administered only in certified healthcare facilities that can observe patients for at least three hours and provide the medical care necessary in case of an adverse event.

- Designing and developing **Apex classes, Test cases, and Lightning Components including CSS and JavaScript.**
- Create and manage **custom objects, fields, formulas & record types, and Quick Actions.**
- Writing SOQL to interact with Salesforce objects.
- Creating **form layout, Flow, Triggers, and validation rules.**
- Writing Unit tests to get coverage of more than 75%.
- Daily stand-ups and calls with the client.
